

Vikan Site Surveys

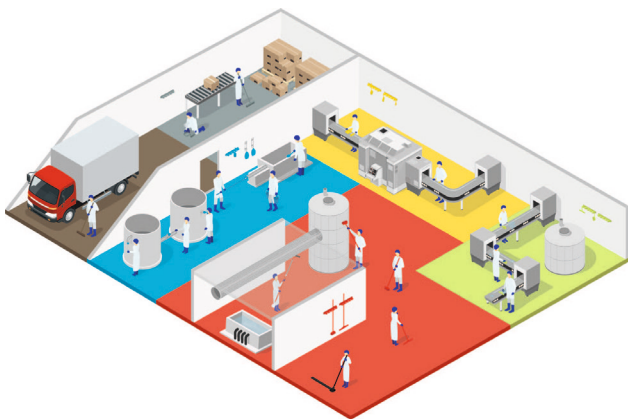

Help Meet Sanitation and Hygiene Challenges

What is the Vikan Site Survey?

A Vikan Site Survey is a great way to address sanitation and hygiene challenges in your facility. Whether it's an upcoming audit or standardising sanitation practices, one of Vikan's cleaning tool experts can help you meet your challenges.

Vikan Site Surveys are a comprehensive review of your entire hygiene operation.

Our experts can conduct Site Surveys in-person or virtually, depending on your needs.

We can address:

- ✓ **Colour coding system** - Do your system and cleaning tool inventory really support your risk management targets?
- ✓ **Regulatory compliance** - Make sure your tools meet all applicable standards and regulatory requirements.
- ✓ **Gaps and optimizations** - Identify missing tools, and improve maintenance and usage practices.
- ✓ **Better tools for the job?** - Is there a better tool available for the job at hand?
- ✓ **Cleaning tool storage** - Protect your tools and improve hygiene through proper tool storage.

Vikan Virtual Site Survey using HoloLens technology

– this gives us the option to see your facility and look at a problem with you without being physically on site. It enables us to help you solve a problem quickly and efficiently - or conduct a remote review of your cleaning operations including recommendations for improvements.
